TOPZERO®

A BREAKTHROUGH IN STAINLESS STEEL SINK DESIGN.

The present invention is directed to a system comprising a rimless stainless steel sink structured and disposed to be undermounted to a solid countertop, such as granite, quartz, or marble, wherein an upper interface between the stainless steel sink and the solid countertop comprises an upper seal which prevents water, bacteria or debris from entering between the rimless upper edge of the stainless steel sink and the top surface of the solid countertop. The sink is undermounted to the countertop with high strength two-part epoxy adhesives.

Our new PATENT PENDING seamless undermount stainless steel sink installation system is called "TopZero". TopZero edge technology brings flawless, seamless appearance against almost any solid surface material without the challenges of complex fabrication techniques.

Bathroom Stainless Series

Elegant Privacy

While PROHS specializes in kitchen sinks, our high quality stainless steel really brings a bathroom to life. They achieve a harmonious balance of style and function. The design's perfect bowl shape and its stainless steel sheen lend an artistic impact, making round or rectangular vanity sinks from PROHS great choices for powder rooms and guest baths.

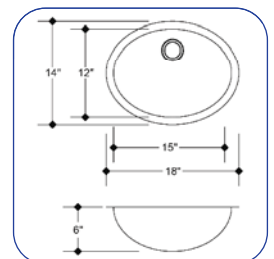

Plus Points:

- Style and Function
- Great shapes for bath or bars
- 304 Surgical Stainless Steel
- Great for Renovation
- 16 to 18 Gauge Stainless Steel

WasteMaid[®] PRO

Waste Maid PRO is the logical alternative to high priced, old line food waste disposers. Our disposers are the latest word in materials and design features while being very competitively priced.

Bio-Shield Antimicrobial provides protection against bacteria-caused odors. Waste Maid PRO is the only disposer with Bio Shield, a unique antimicrobial agent, permanently molded into the "wet" components of the disposer to eliminate bacteria-caused odors. It also inhibits the growth of a wide range of microorganisms.

Waste Maid PRO is also the only food waste disposer with the **Torque Master** balanced grinding system which features balanced turntables and balanced armatures as the heart of the system. This, along with corrosion proof components provide for less vibration and longer life.

All Waste Maid PRO disposers have modern, **Permanent Magnet Motors** that are smaller, lighter and more efficient than the old, slow and heavy induction motors. These high torque motors produce 2600 or 2700 rpm virtually eliminating jams before they can happen.

The magnetic **Silver Guard** captures most metal objects before they enter into the disposer chamber. This protective feature helps prevent damage to valuable cutlery. It also helps prevent damage to the disposer as well as expensive repairs caused by metal objects falling into the disposer
